Stevens Institute of Technology - Computer Science Department
Mid-Term Course Survey

Course No: CS561 *Course Name:* Database Management Systems I *Section:* WS *Session:* Online

Instructor: Ruth Schwartz *Teaching Assistant:* _____

Student: please help us to evaluate your learning experience in this course by filling out this short survey. The survey is intended to help the instructor deliver a good educational experience. Your constructive feedback is greatly appreciated.

Instructor: please collect and analyze these surveys and make any adjustments necessary to improve the course. There is no need to archive these forms.

1. What do you like about this course so far?

   The course was well planed. It was easy to follow. There was enough time to finish the homework and learn about the topics. The classes were organized and kept in schedule. Assignments were fairly graded.

2. What suggestions do you have to improve this course?

   It would be great if late assignments have penalty instead of zero, so that our grades will not get affected. I could not see people in canvas who took the same course. It will be helpful, if the same is available.

3. Do you have any other comments?

   It will be great if you have another set of assignment questions or quiz, if we get zero for late submissions. This will help us to boost our grades.
